

Step 9: Publish WaMDaM Sqlite files into HydroShare

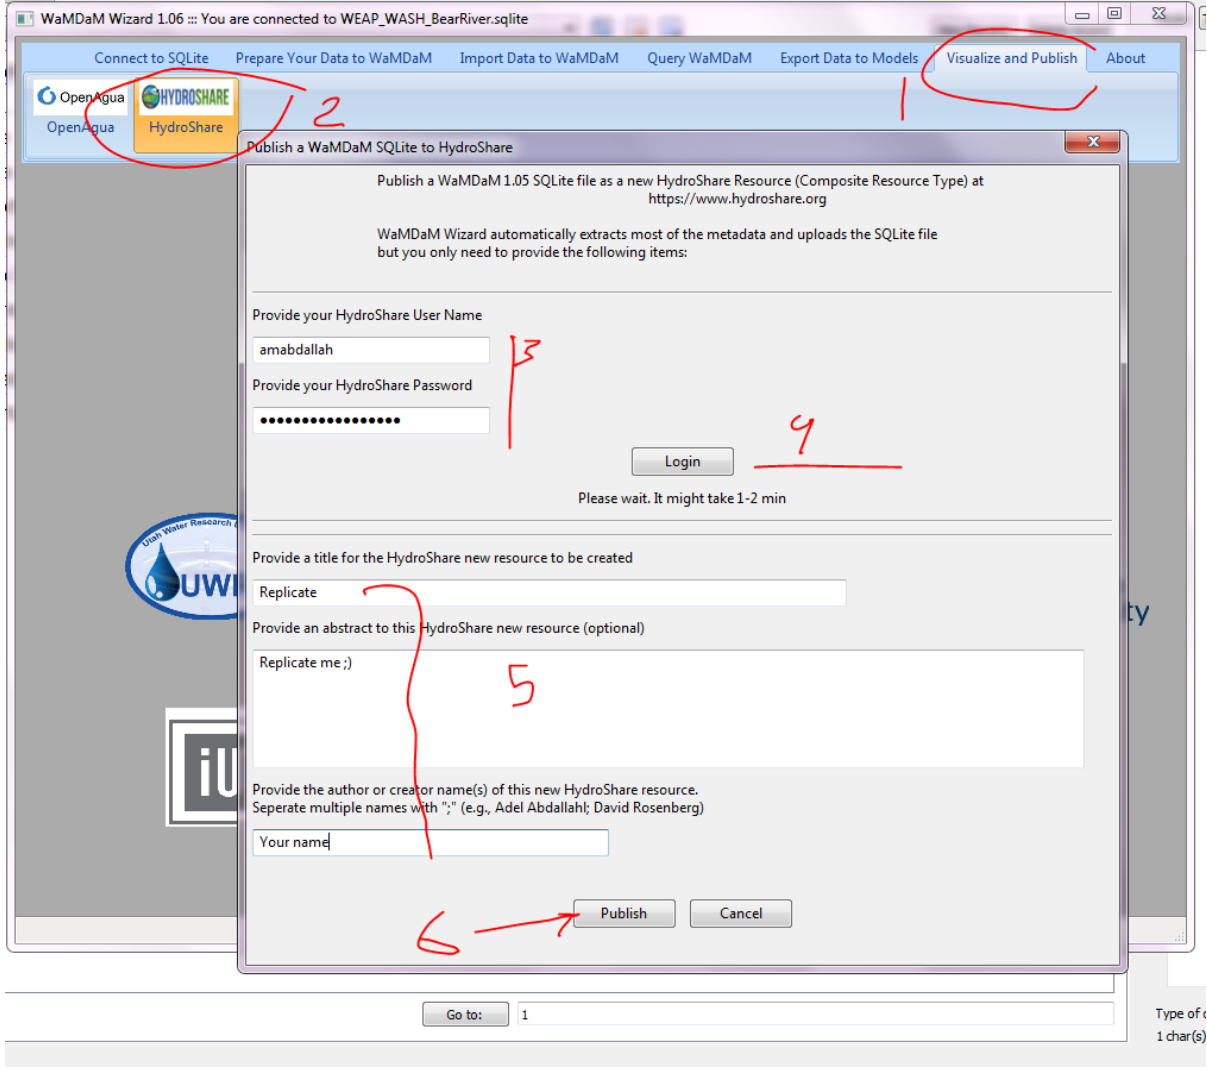

By Adel M. Abdallah, Feb 2022

Prerequisites

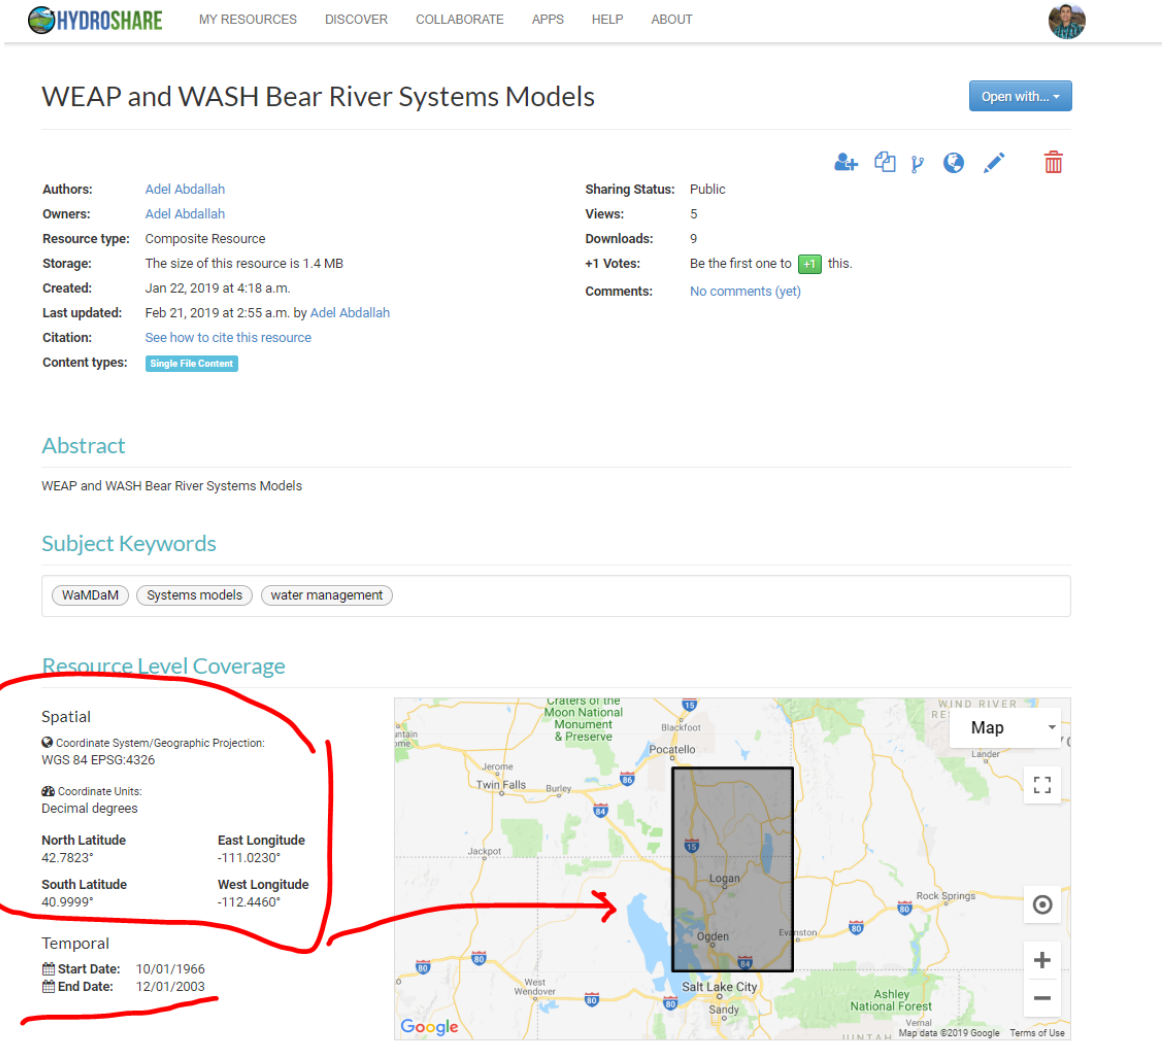

- You should have an account with HydroShare
- You should still be connected to the provided SQLite database you worked with above
- First connect to the SQLite files here
https://github.com/WamdamsProject/WaMDaM_JupyterNotebooks/tree/master/2_ServeToModels/Files
- Connect to the Bear_River_WEAP_WASH.sqlite and follow the instructions below. Then disconnect it or close the Wizard.
- Connect to the Bear_Weber.sqlite.sqlite and follow the insructions below
- In the WaMDaM Wizard main window, click at **Visualize and Publish** tab, then click at the Hydrohare button.
- provide your user name and password to HydroShare then click login.
- Provide a tite, abstract, and your name as an author to a resource you will create in HydroShare for the WEAP and WASH model SQLite file. For the sake of demonstration, adding a few words should work. Being descriptive is always a good practice.
- Click publish.
- Go to your borwser and hard refresh HydroShare page. Go to **My Resources** tab in HydroShare. You will see the newly uploaded resource.
- Click at the newly added resouce and make it public. Feel free to make edits you see fit
